

PHYSICAL DISABILITIES ADJUSTMENTS

EXAMPLES OF ADJUSTMENTS

Pre-re-re

Typically, a child with physical disabilities will receive an Individualized Education Program (IEP) from the school district. The IEP is a document that describes the child's strengths, needs, and goals, and outlines the services and supports that will be provided. The IEP is a legal document that is enforceable in court. The IEP is a document that is developed by a team of professionals, including the school district, the parents, and the child, if the child is capable. The IEP is a document that is updated annually or more frequently if needed. The IEP is a document that is used to monitor the child's progress and to make adjustments as needed. The IEP is a document that is used to ensure that the child is receiving the services and supports that they need to succeed in school. The IEP is a document that is used to ensure that the child is receiving the services and supports that they need to succeed in school. The IEP is a document that is used to ensure that the child is receiving the services and supports that they need to succeed in school.

Le-e-re-re-e

This is a very common adjustment for children with physical disabilities. It involves providing the child with a wheelchair, which allows them to move around the school building and campus. This adjustment is typically made at the start of the school year. This is a very common adjustment for children with physical disabilities. Physical disabilities can affect a child's ability to participate in extracurricular activities. For example, a child with a physical disability may be unable to participate in sports or other physical activities. This can be a significant barrier to the child's social and physical development.
