

1

- Teach meta-cognitive strategies and use paired learning.

## A . . .

- Provide text-to-speech app to read aloud text and numbers (for example talking calculators).
- Mathematics notation tools are useful to help set out equations, particularly for learners with handwriting difficulties (for example Equatio).
- Use equation solving digital tools that prompt learners through the problem-solving process. For example iDevBooks is a large collection of evidence-based mathematics apps.
- Socratic – will find the best resources to help with mathematic concepts from a picture you take of the problem.
- ModMath – an iPad app that helps to show mathematics equations and concepts.
